Before using this task in a production system, please perform extensive testing.

Stonebranch GmbH assumes no liability for damage caused by the performance of the Universal Tasks

2 Introduction

Business Objects 4.x comes with a RESTful web service SDK. The Business Intelligence platform RESTful web service SDK lets you access the BI platform using the HTTP protocol and allows to schedule any Schedulable resources include documents, for example Crystal reports and WebI reports.

The here described Universal Task calls the “Schedule now” REST Webservice to run e.g. a Crystal report or WebI report from Universal Automation Center.

Details on the RESTful web service SDK can be found here [1]:

Some details about the universal task for BO:

- It is based on the standard SAP BO REST Interface, which was introduced with SAP BO 4.x
- The SAP BO REST Interface is called from a Universal Agent running on a Windows Server
- With minor adjustments the task also runs on a Universal Agent for Linux/Unix.
- The Windows Server needs to have Python 3.6.3 installed
- Any Additional SAP BO REST API command as listed in [1] can also be implemented using the same approach.
- An extract of the Python script, which is called as part of the Universal template can be found here [3] or can be looked up in the controller under the Universal template
- Exit code processing has been added to the universal task script:
 - In case a report fails E.g. If you provide a wrong Business Object ID, it will fail, and you can re-start the job with the correct ID.
 - In case of a connection error the task will fail e.g. wrong IP address or Port of the SAP BO HOST
 - In case a wrong password has been entered the instance will fail
- You can configure all connection Parameters via the Universal Task
- Restriction: Currently only “Enterprise Security” is supported
- You can select different log-levels e.g. Info and debug

3 Installation

3.1 Software Requirements

Universal Task name: *SAPBO_REST_SchdeuleForms_now*

Related UAC XML Files for template and task: [2]

Software used:

For the set-up you need:

1. Python 3.6.3 for Windows installed on a server where an Universal Agent is installed.
2. For Python the following modules are required:
 - *requests*, to perform the REST connection towards the SAPBO REST API
 - *argparse*, to allow testing of the Universal Template script on the command line
 - *sys*, for output re-direct processing
 - *datetime*, date and time stamps for messages

Note: Only the module requests need to be added to python 3.6.3
3. Universal Controller at least 6.4.2.x
4. Universal Agent 6.3.0.3 or higher installed on a Windows Server
5. SAP BusinessObjects Business Intelligence platform 4.2

3.2 Installation Steps

The following describes the installation steps:

1. Install Python 3.6.3 for Windows on the Universal Controller server or any Windows Server running a Universal Agent.

Official Download link: <https://www.python.org/downloads/>

Note:

Install python with the options:

- add python to windows path
- Install for all users

2. Add the request module to your python installation

In a dos command shell run as Administrator:

pip install requests

Note: The module *requests* contain the commands to perform the REST commands towards the SAPBO Webservice API.

It is assumed that the modules argparse, sys, datetime, logging are already available. If not install them via pip.

3. Import the Universal Task including the Universal Template to your Controller

Go to “All Tasks” and load via the Import functionality the Universal Task configuration into the Controller.

4 Universal Task Configuration

1. Activate: Resolvable Credentials in Universal Automation Center:

Dashboards X RUN SAPBO REPORT Tasks X Properties X

93 Properties

Name	Value
Resolvable Credentials Permitted	true

2. Fill Out the Universal Task for each Report to be scheduled:

Description:

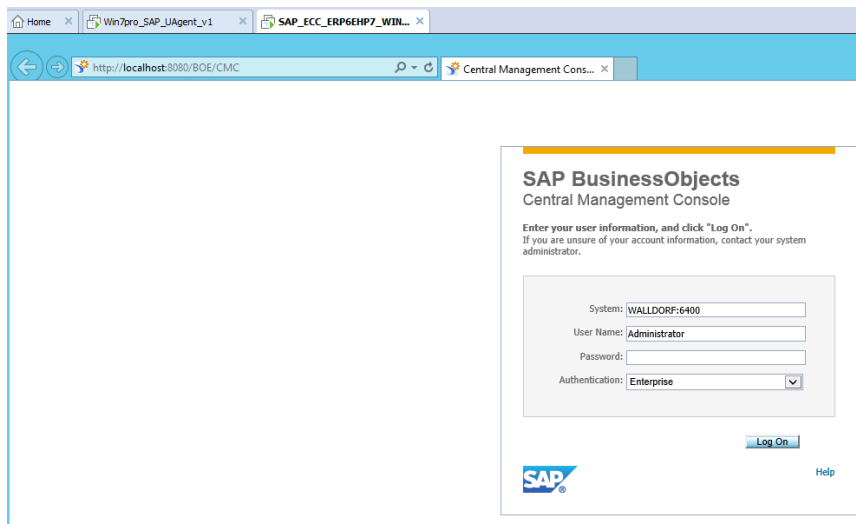

- SAP BO Host: Server where SAP Business Objects is installed
 - SAP BO Port: Default Port of SAP BO
 - SAP BO Credentials to execute the SAP BO Report
 - Business Object ID: Resource ID for scheduling e.g. ID of the Crystal Report
- This ID can be looked up in the SAPBO Central Management Console (see screenshots below)

5 SAP Business Objects

The following provides to non-SAP BO Consultants an Introduction how to find the Business Object ID and how to verify that a report has been executed successfully in SAP BO.

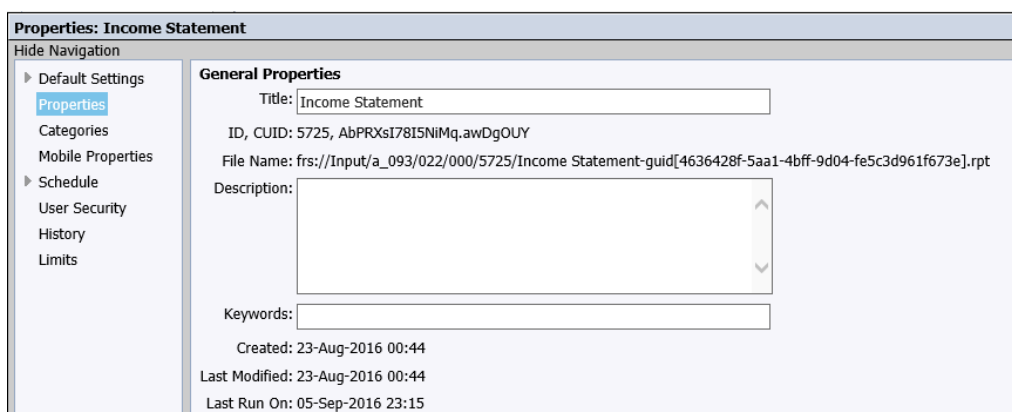

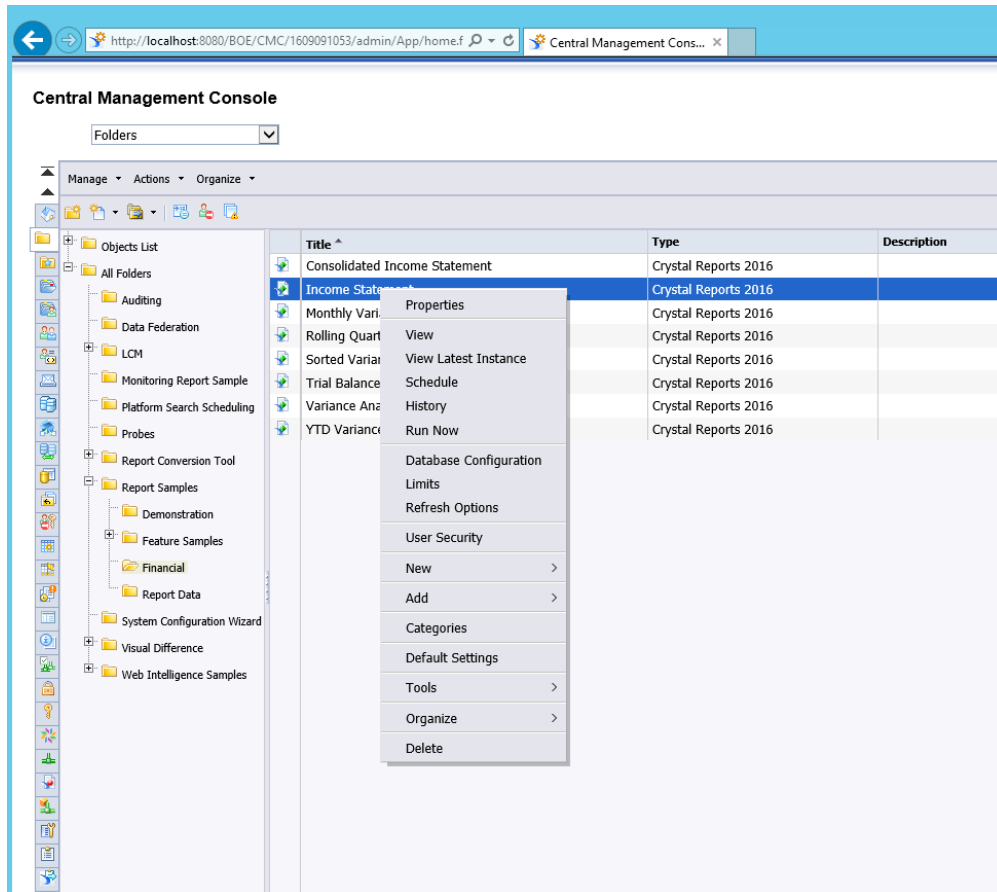

5.1 How to look up the Business Object ID:

1. Log-in to the SAP BO Central Management Console

2. Log-in to the SAP BO Central Management Console

Browse to *Folders -> All folders -> Report Samples -> "income statement"* and look up the "general properties"

Business Object ID: 5725

5.2 Verify Task execution

1. Log-in to the SAP BO Central Management Console

SAP BusinessObjects
Central Management Console

Enter your user information, and click "Log On".
If you are unsure of your account information, contact your system administrator.

System: WALLDORF:6400
User Name: Administrator
Password:
Authentication: Enterprise

[Log On](#) [Help](#)

2. Log-in to the SAP BO Central Management Console

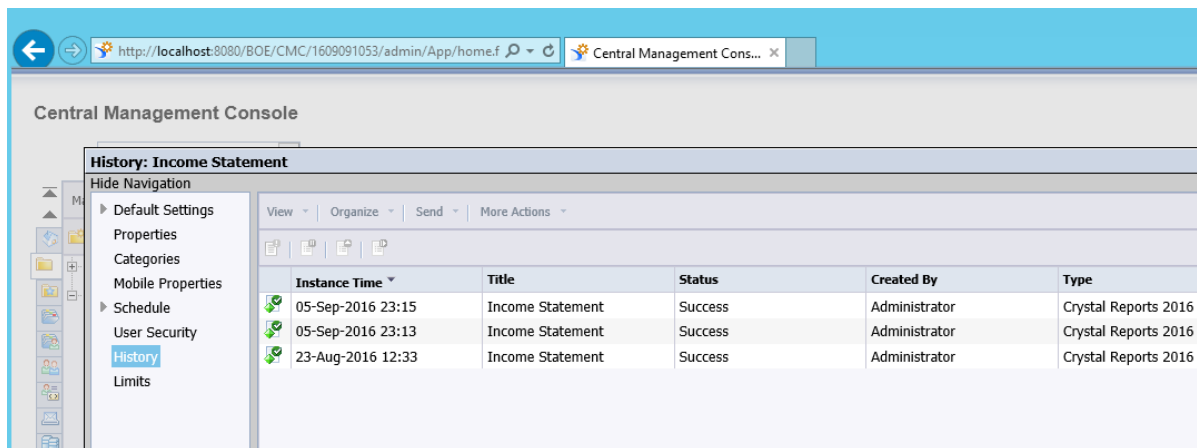

Browse to *Folders* -> *All folders* -> *Report Samples* -> "income statement" and look up the "History".

Central Management Console

Folders

Manage Actions Organize

Title	Type	Description
Consolidated Income Statement	Crystal Reports 2016	
Income Statement	Crystal Reports 2016	
Monthly Variance	Crystal Reports 2016	
Rolling Quarterly	Crystal Reports 2016	
Sorted Variance	Crystal Reports 2016	
Trial Balance	Crystal Reports 2016

YTD Variance	Crystal Reports 2016	

6 Test Cases

The following basic test cases has been performed:

Case#	Assumed behavior	Result
Start a Job based on a SAP BO resource ID	Job should finish with status "success" in SAP BO and the Task Instance. The Task Instance output should contain a trace log.	Correct
Start a Job based on a wrong SAP BO resource ID	Task should fail with error "404 Client Error"	Correct
Start a Job on SAP BO providing the wrong server port	Task should fail with error "Http Connection Pool Error 10061"	Correct
Start a Job on SAP BO providing the wrong server hostname	Task should fail with error "Http Connection Pool Error 10061"	Correct
Start a Job on SAP BO with a blocked firewall	Task should fail with error "Http Connection Pool Error 10061"	Correct
Start a Job on SAP BO with the wrong user	Task should fail with error "401 Client Error"	Correct
